Surgical Procedure for Anesthesia			

- I acknowledged that my pet is scheduled for an anesthetic procedure with or without surgery. I have been informed that advances in anesthesia and anesthetic monitoring techniques have made routine procedures relatively safe, with low rates of complications. However, I understand that occasional problems can occur due to preexisting conditions that are not evident during routine histories and physical examinations. To minimize problems, the doctors and staff at this veterinary practice have recommended that my pet be screened prior to anesthesia by means of the diagnostic tests indicated below:

Diagnostic Tests

Please Initial next to your choice (s) below

<input type="checkbox"/>	Chem 10 basic blood test	This test checks liver function, kidney function, blood sugar levels, anemia, and for possible infection.
<input type="checkbox"/>	Chem 15 comprehensive chemistry	This test checks liver function, kidney function, pancreas functions, diabetes, blood sugar levels, hydration, anemia, possible infection, and more.
<input type="checkbox"/>	DECLINE Pre-Anesthetic Diagnostic Tests	I hereby decline the above recommended preanesthetic diagnostic tests and, in the absence of negligence, agree to hold the attending doctor(s) and staff at this veterinary practice harmless for any untoward anesthetic, surgical, or medical complications that might have been detected and avoided had these tests been performed.

I have read and fully understand the terms and conditions set forth above.
